

TC Series - Lighting Control Panels *Windows Software*

KEY FEATURES

- Edit and program your TC Series panels through your computer
- Upload and download lighting control programs
- Real-time panel control and status
- Load grouping via remote commands
- Several functional reports
- Create snapshots of panel programming for backup

OVERVIEW

The TC Series Windows Software accessory allows you to easily program, edit and maintain operating files for your TC Series panels from one or more computers. The software permits the user to upload and download program files, control relays, check relay status, check relay run-time, view logs and more with an easy user interface. Panel program files can be created, altered and archived on the computer. The software can communicate via serial and modem communications.

COMPUTER SPECIFICATIONS
